

CVLX acknowledges the importance of water as an essential resource for the environment. CVLX realises the need to use the resource responsibly and in a manner that is sustainable

Our Commitment

- ✓ Use water in an efficient manner, including the operation and maintenance of personal equipment and the environment;
- ✓ Ensure that all environmental legislation and regulations are met and ensure all relevant approvals are gained for on-site works;
- ✓ Regulate water use through auditing and monitoring to identify any potential problems with the network;
- ✓ Apply Best Environmental Practices in the overall management of water.

The Facts

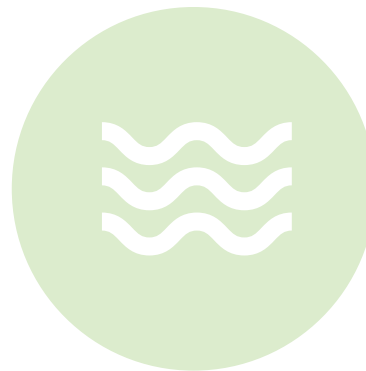

RAINWATER HARVESTING

31,068 m² of roof space which captures all rainfall and feeds to a 7 megalitre rainwater pond for use on site which reduces the need for mains water.

WASTEWATER TREATMENT

On-site capture and treatment of effluent and truck wash water through a state-of-the-art system which treats the water is treated and allows reused as irrigation during summer months.

WETLANDS

Establishment of wetland for holding and natural filtering of captured surface water, designed to replicate natural wetlands for ecological purposes.

WATER EFFICIENCY

Through careful design and construction CVLX uses selected water-efficient fittings and fixtures for use in dust suppression, amenities, livestock troughs and truck wash.
